PROFESSIONAL PROFILE

First-year Electrical and Electronic Engineering student at the University of Birmingham with a strong foundation in **C programming** and systems-level thinking. Eager to apply principles of hardware-level efficiency to high-level software challenges in AI and high-performance computing. A fast learner actively self-teaching Python and seeking a Summer 2026 internship to contribute to challenging technical problems.

EDUCATION

University of Birmingham | Birmingham, UK *BEng Electrical and Electronic Engineering (Expected: Jun 2028)*

- **Key Modules:** Introduction to Computing for Engineers (C Programming), Engineering Mathematics 1, Electrical Engineering 1, Integrated Design Project 1.
 - **Labs:** Gained hands-on experience with circuit analysis, digital logic design, and debugging C code.
-

TECHNICAL SKILLS

- **Programming Languages:** **C** (Proficient), **Python** (Learning)
 - **Software & Tools:** **Git & GitHub** (Version Control), VS Code, Code Blocks
-

PROJECTS

Command-Line To-Do List Manager (C) | <https://github.com/Jason-Wang313/C-to-do-list>

- Developed a terminal application in C to manage persistent tasks.
 - Implemented a **singly linked list** from scratch to store task data.
 - Used **malloc()** and **free()** for dynamic memory allocation, preventing memory leaks.
 - Integrated **File I/O** (fopen, fprintf, fgets) to save tasks to a file on exit and reload them on startup.
 - Demonstrated a strong understanding of **pointers (including pointers-to-pointers)**, **structs**, and **safe user input parsing**.
-
